

CURRICULUM VITAE

ABOUT ME

Dreams are shaped by ideals, and ideals by our beliefs. I believe I'm an organised, efficient and hardworking person. My greatest yearning is to design and deliver projects that respond to the climatic conditions of that region and do not harm our earth in the long run. I strive to discover and accept new ideas that can be put into practice effectively. As a student who pursued masters in sustainable architecture, I realised the vital need for learning about the various methods of conserving energy, applying passive design strategies and understanding how to manage resources efficiently and sustainably. As an architect, I believe that I have to follow my passion for learning and doing my part to produce meaningful architecture through sharing of knowledge and skills.
